Social Learning Theory | Psychology Today

Social learning theory is a theory of learning process and social behavior which proposes that new behaviors can be acquired by observing and imitating others. It states that learning is a cognitive process that takes place in a social context and can occur purely through observation or direct instruction, even in the absence of motor reproduction or direct reinforcement. [2]

Social learning theory - Wikipedia

It's been said that Albert Bandura's theory of social learning spans the gap between behaviourism and cognitivism. Social learning theory incorporates the idea of behaviour reinforcement from the former, and cognitive processes such as attention, motivation and memory from the latter.

Learning Theories: Bandura's Social Learning Theory

Albert Bandura's social learning theory stressed the importance of observational learning, imitation, and modeling. "Learning would be exceedingly laborious, not to mention hazardous, if people had to rely solely on the effects of their own actions to inform them what to do," Bandura explained in his 1977 book on the subject.

Biography of Psychologist Albert Bandura

The primary principal of Bandura's social learning theory, as stated above, is that humans learn by observing others and then emulating what they have observed. Up until this time, behaviorists had a "corner on the learning theory market" by stating that human learning is the result of reward, punishment, and reinforcement.
