NURBS: An Introduction - ThePro3DStudio

An introduction to NURBS. Philippe Lavoie January 20, 1999. A three dimensional (3D) object is composed of curves and surfaces. One must find a way to represent these to be able to model accurately an object. The two most common methods to represent a curve or a surface are the implicit and the parametric method.

NURBS++generates two types of standard curves automatically: a circle or a line. You can creates a circle centered at (0;0;0) of radius 1 and having a starting and ending angle of 0 and 2^π respectively.Since a NURBS curve is rational, it can represent exactly a circle. Something that a B-Spline can't do. NurbsCurvef curve ;

The algorithms are implementations of the pseudocode in Appendix C of An Introduction to NURBS. Here the algorithms have been loosely translated into a 'real' programming language, i.e., C. Hopefully, the availability of the algorithms in C will increase your understanding of the algorithms and hence of the underlying mathematics.
