The idea is that businesses collect massive sets of data that may be

homogeneous or automatically collected. Decision-makers need access to smaller, more specific pieces of data from those large sets. They use data mining to uncover the pieces of information that will inform leadership and help chart the course for a business.

What is the difference between big data and data mining?

→ Majority of Data Mining work assumes that data is a collection of records (data objects). → The most basic form of record data has no explicit relationship among records or data fields, and every record (object) has the same set of
