History of PHP and Related Projects; Migrating from PHP 7.3.x to PHP 7.4.x; Migrating from PHP 7.2.x to PHP 7.3.x; Migrating from PHP 7.1.x to PHP 7.2.x; Migrating from PHP 7.0.x to PHP 7.1.x; Migrating from PHP 5.6.x to PHP 7.0.x

PHP: PHP Manual - Manual
Download documentation. The PHP manual is available in a selection of languages and formats. Pick a language and format from the table below to start downloading. Notes to read before you download. The English version should be considered the most accurate, since translations are based on that version.

PHP: Download documentation
The PHP Manual is a technical document, and should be written so. The use of "you" is rampant in the manual, and presents an unprofessional image. The only exceptions to the personalization rule are: the PHP Tutorial and FAQs. Example: INCORRECT: You can use the optional second parameter to specify tags that should not be stripped.

PHP: Functions - Manual
To have an argument to a function always passed by reference, prepend an ampersand (&) to the argument name in the function definition: The default value must be a constant expression, not (for example) a variable, a class member or a function call. Note that when using default arguments, any ...

PHP: Function arguments - Manual
All of the documentation teams use an early fork of the original PHP manual build system. These systems evolved independently, and took over some improvements from the others on an occasional basis (the PEAR documentation team uses a variant of the revcheck developed for phpdoc for example).

PHP: Documentation Tools
Arrays. An array in PHP is actually an ordered map. A map is a type that associates values to keys.This type is optimized for several different uses; it can be treated as an array, list (vector), hash table (an implementation of a map), dictionary, collection, stack, queue, and probably more.

PHP: Arrays - Manual
PHP 7.2.9 API documentation with instant search, offline support, keyboard shortcuts, mobile version, and more.

DevDocs — PHP documentation
When the user fills out the form above and clicks the submit button, the form data is sent for processing to a PHP file named "welcome.php". The form data is sent with the HTTP POST method. To display the submitted data you could simply echo all the variables. The "welcome.php" looks like this:
