Erectile dysfunction (ED) is common, as is cardiovascular disease (CVD). As both affect similar groups it is not surprising that the two conditions frequently coexist [1,2]. Several epidemiological studies show both a high incidence and prevalence of ED worldwide, currently affecting up to 150 million men.

disease

However, experts now believe that erectile dysfunction preceding heart problems is more often due to the dysfunction of the inner lining of the blood vessels (endothelium) and smooth muscle.

Endothelial dysfunction causes inadequate blood supply to the heart and impaired blood flow to the penis,
