Workbook Answers Forces in Fluids - hilldale.k12.ok.us Pressure is calculated by dividing force by area and is measured in units called pascals. For an example, if a force of 10 newtons was exerted over an area of 2 square centimeters, the pressure would be 5 pascals.

Forces In Fluids Workbook Answers - modapktown.com

I. Fluids Exert Pressure A. Calculating Pressure: Pressure equals force divided by area. B. Pressure and Bubbles: The shape of the bubble partly depends on an important property of fluids: Fluids exert pressure evenly in all directions. The air you blow into the bubble exerts pressure evenly in all directions. So, the bubble expands in all
