Let's take a look at how to interpret each regression coefficient. Interpreting the Intercept. The intercept term in a regression table tells us the average expected value for the response variable when all of the predictor variables are equal to zero. In this example, the regression coefficient for the intercept is equal to 48.56. This means that for a student who studied for zero hours ...

Chapter 5 Time series regression models. In this chapter we discuss regression models. The basic concept is that we forecast the time series of interest (y) assuming that it has a linear relationship with other time series (x) . For example, we might wish to forecast monthly sales (y) using total advertising spend (x) as a predictor. Or we might forecast daily electricity demand (y) ...
