McGraw-Hill Nurse's Drug Handbook - Simard Artizan Farm

Calculating Dosage Using Body Weight Method After converting the child's weight into kilograms, a safe dose range for that child is calculated. For example, if a dosage range of 10 to 30mg/kg of body weight is a safe dosage range and the child weighs 20 kg, calculate the low safe dose using the following: = Cross multiply the fractions: $10\text{mg} \times 20\text{kg} = 1\text{kg} \times X\text{mg}$.

Pearson Pediatric Drug Guide

General. Most drugs in children are dosed according to body weight (mg/kg) or body surface area (BSA) (mg/m^2). Care must be taken to properly convert body weight from pounds to kilograms (1 kg = 2.2 lb) before calculating doses based on body weight. Doses are often expressed as mg/kg/day or mg/kg/dose, therefore orders written "mg/kg/d," which is ...
