Sensation And Perception

Sensation and perception are two separate processes that are very closely related. Sensation is input about the physical world obtained by our sensory receptors, and perception is the process by which the brain selects, organizes, and interprets these sensations. In other words, senses are the physiological basis of perception.

Sensation and Perception | Introduction to Psychology

Sensation refers to the process of sensing our environment through touch, taste, sight, sound, and smell. This information is sent to our brains in raw form where perception comes into play. Perception is the way we interpret these sensations and therefore make sense of everything around us. This chapter will describe various theories related to these two concepts and explain the important role they play in the field of psychology.

Sensation and Perception in Psychology 101 at AllPsych ...

This process called sensation occurs when physical energy from objects in the world or in the body stimulates the sense organs. However, only when the signals come together meaningfully do we actually perceive a bouncing basketball. Perception happens when the brain organizes and interprets sensory information.
