Offshore Load Generator STAAD.Offshore consists of a suite of pre and post processor modules to the STAAD.Pro Structural Analysis and Design Program. The program is made up of three modules: The WAVELOAD module calculates wave loads on structures using either STREAM function, STOKES 5th Order Theory, AIRY theory, or a user defined grid wave.

### **STAAD.Offshore - Research Engineers**

The program generates STAAD.Pro loading data for the stiffness analysis. The wave load module computes the wave loading intensities due to wave and/or current effects along the submerged portion of the structural members and appurtenances below the wave surface profile, relative to the local X, Y, Z and global X, Y, Z axes.

STAAD.Offshore allows users create wave loading and transport loads on offshore structures. It can handle pipes, rectangular/square tubes, and open sections such as Ibeams and channels, or other structural shapes by judicious selection of the wave force coefficients. A typical scenario is an offshore jacket structure as shown in Figure.
