The breaking strengths of various diameters of steel wire cable are listed here. Cable construction safety standards dictate a minimum of five to one safety factor when designing cables for most applications. If a cable is being designed for a 300 pound maximum weight load, then a 1/8 inch cable with a 1700 – 2000 pound breaking strength would be needed. For critical safety or shock load applications an 8 or 10 to one safety factor is needed.
