## Valve Stem Seals Skf

Valve stem seals provide a defined metering rate of oil to the valve stem interface of internal combustion engines to lubricate the valve guide and minimize engine emissions. They are available for diesel and gasoline engines with and without boosting. In addition to conventional valve stem seals, our offer also includes valve stem seals for engines with high pressures in the manifolds, e.g. because of turbo chargers or for exhaust brakes on commercial engines.

Small But Mighty Different than other seals in the engine, valve stem seals play an important role in lubrication. Valve stem seals allow a controlled amount of oil to lubricate the valve stem as it moves the valve guide. The amount of oil that passes by the valve stem seal must be precisely controlled.

While the valves have guides or sleeves to keep combustion gases from passing through them, the seals on the top of the valves keep oil in the valve cover from being sucked down into the engine. Seals, typically made of high-strength rubber, fit over the top of the valve stem inside a small collar.
